Date: May 2021

StrathE2EPolar was developed from StrathE2E2 version 3.3.0 – a temperate shelf sea model which lacked any driving data related to sea ice, and state variables and processes associated with ice.

StrathE2E2 version 3.3.0 is available from CRAN - <https://CRAN.R-project.org/package=StrathE2E2>; Heath et al. 2021).
